# UK Aerospace and Defense Market Overview

The UK aerospace industry is a major market for U.S. exports and is the second largest in the world behind that of the U.S. Total UK civil aerospace sales in 2013 amounted to \$20.2 billion, and the sector had a 17% global market share. The UK does not produce any large civil aircraft and 75% of domestic production is exported. The UK has a particular reputation as a global center of excellence for the design and production of wings and aero structures, aero engines and aircraft systems (including landing gear). In addition, the UK has a thriving maintenance, repair and overhaul sector, servicing the huge numbers of military and civil aircraft that fly through and from the UK every year. The UK has a highly developed and competitive aerospace industry in which more than 3,000 aerospace companies operate. The UK supply chain employs some 230,000 people directly and indirectly, ranging from very large companies such as OEMs to small businesses making very specialized components.

## Sub-Sector Best Prospects

The key areas and focus of the UK aerospace market for the foreseeable future include:

- Aerodynamics (e.g. wing design)
- Propulsion (e.g. rotor blades, engine assembly)
- Aero structures (e.g. fuselage and wing assembly)
- Advanced systems (e.g. avionics, undercarriage)

## Opportunities

Entry or expansion by U.S. companies into the UK aerospace market is challenging for SMEs and OEMs alike. Due to a mature and sophisticated supply chain, a U.S. company can expect to commit both time and resources to enter or expand within the UK aerospace market. The aerospace supply chain is well-integrated with the primes, who are all looking to reduce the number of their suppliers. Developing and increasing the domestic supply chain is a matter of significant interest to the UK Government, and in 2013 the Department of Business, Innovation and Skills unveiled a \$20.2 billion initiative to help give a competitive advantage to UK companies in the aerospace market. In addition, through the Aerospace Growth Partnership, UK industry and government have established a collaborative partnership to increase investment in UK innovation, supply chains and engineering skills, with both UK industry and government committing \$3.5 billion towards the creation of an Aerospace Technology Institute.

Due to the highly developed and competitive nature of the UK aerospace industry, U.S. suppliers may want to consider collaborating with a larger customer that has established a presence in market which could provide strategic access to the UK and Europe. U.S. companies should also expect to enter the UK market at a lower tier of the supply chain than they might usually enter in the U.S. or globally. Suppliers may also need to consider using a local distributor or agent who has established ties within the market.

## U.S. Commercial Service
